RISK MANAGEMENT POLICY AND FRAMEWORK

- (1) First Investment Bank has established, maintains and develops a risk management system which ensures the identification, assessment and management of risks inherent to its activity. The main objective in managing the overall risk profile of the Bank is to achieve a balance between risk, return and capital.

First Investment Bank assumes risks while ensuring the required level of equity capital and an effective management process. The Bank maintains financial resources that are commensurate with the volume and type of operations performed, with its risk profile and the internal control systems and mechanisms for risk management.

First Investment Bank AD determines an overall maximum level of risk by different types of risk. The Bank determines its risk propensity and risk tolerance levels so that they correspond to its strategic objectives and stable functioning.

In measuring risks First Investment Bank AD applies the Standardised Approach; for internal purposes it also applies internal rating models, internal VAR models, as well as scenario analyses and stress-tests.

LEVERAGE

(8) The risk of excessive leverage is the risk resulting from the Bank's vulnerability due to the leverage level reflecting the relative amount of assets, off-balance sheet liabilities and contingent liabilities for payment or collateral ensuing from financing received, commitments made, derivatives or repo deals, without the liabilities payable only upon liquidation – compared to the Bank's common equity. The Bank applies adequate processes for assessment, monitoring and management of the risk of excessive leverage. The risk of excessive leverage is monitored using a number of indicators, including the leverage ratio, as well as the discrepancies between assets and liabilities. The Bank manages the risk of excessive leverage using various scenarios, including scenarios which take into account its possible increase due to a decrease in Tier 1 Capital resulting from possible losses.

- (9) The information concerning the leverage ratio and the total exposure measure used in calculating the leverage ratio, as well as reconciliation with the information disclosed in First Investment Bank's consolidated financial statements for the year ended on 31 December 2020 with the independent auditor's report thereon, is presented in the template introduced by the European Banking Authority:

(14) The capital needs of First Investment Bank are determined according to its business strategy, risk profile and risk appetite. In this regard, the assessment of the required economic capital of the Bank reflects the risk profile and risk appetite of its activity. The main indicators of the quantitative evaluation methods used take into account unfavorable economic environment scenarios.

The internal system for assessing the required internal capital is based on analytical tools and techniques, stress tests, forecasting models that allow more detailed assessment of capital adequacy in accordance with the risk profile of the Bank and the current operating environment.

The risks, evaluated with the help of internal models within ICAAP, are calculated with security level of 98%.

In the framework of the risk management strategy, the risk appetite is defined so as to meet the target “B+” rating on the scale of the Fitch Ratings credit rating agency, as risks, evaluated with the help of internal models within ICAAP, are calculated with security level of 98%, i.e. in keeping with target rating.

With regard to risk appetite, it is assumed that in addition to the internal defined capital for Bank’s risk exposures, preventive buffers will be maintained for unexpected scenarios with total amount equal to regulatory required capital buffers.

With a view to developing an adequate risk strategy scope also for the purposes of ICAAP, the Bank prepares a risk map showing the risks identified in the Bank, their materiality, as well as the methods for measuring them.

	Risk source	Valuation methods used under Pillar I	Valuation methods used under Pillar II	Materiality
Risks covered under Pillar I	Credit risk	Standardized approach	VaR model for credit losses on exposures to individuals and companies, Standardized approach for all others	Yes

COUNTERPARTY CREDIT RISK

(19) First Investment Bank AD applies the principles of Regulation 575 in calculating the own funds requirements for counterparty credit risk using the standardised approach. At 31.12.2020 the exposures from counterparty credit risk amounted to BGN 4,722 thousand for institutions, BGN 156 thousand for corporates and BGN 746 for other.

TECHNIQUES FOR REDUCING CREDIT RISK

(20) When extending loan facilities, the Bank requires collateral for its receivables – collateral must be sufficient in type, value and liquidity. The main principles in accepting collateral are: proper documentation, sufficient value to cover the debt and possible expense for selling the collateral, liquidity, etc. The value of collateral is assessed both by internal and external assessors. Where the assessment is made by an external assessor, it is always confirmed by an internal assessor. Collateral is subject to regular review and revaluation.

NON-TRADING ACTIVITIES

(26) The total amount of unrealized gains or losses from revaluation included in the original or additional own funds concerning equity exposures not in the trading book amounted to BGN 0 thousand at 31.12.2020.

(27) By measuring of the interest sensitivity of the assets and liabilities of the Bank has been made the assumption for static balance sheet, assuming zero growth and preserving the structure of assets and liabilities. Obligations on the borrowings by customers are accounted according maturity of the expected cash flows, as none maturity obligations are accounted "at sight", without modeling effective maturity. Due to fact that main part of the receivables are with floating interest rate, it is not prepared a forecast for prepayments on loans. For the purpose of measuring of interest rate risk, prepayment risk can be considered as residual. Banking book interest rate risk is calculated on monthly basis.
